## FOR IMMEDIATE RELEASE:

### TCS Healthcare Technologies Rolls Out ACUITY 7.3 Software

*New version of popular software will enhance workflows for health care plans and improve their relationships with members.*

**Auburn, Ca – March 13, 2017** -- TCS Healthcare Technologies is excited to announce the launch of its ACUITY 7.3 software platform. The newest release of the software adds several features that are designed to improve medical management operations for health plans and other risk-bearing entities, allowing them to provide more responsive service to their providers and members.

“We’re excited to introduce these changes in the ACUITY software. ACUITY 7.3 represents the continued evolution of our software, providing improvements in both member outcomes and workflow efficiency,” said Rob Pock, CEO. “This is all about continuing development. We never stop listening to our clients’ feedback so that ACUITY will always be designed by our clients for our clients.”

ACUITY 7.3 is the result of improvements made by TCS’s team of US-based clinicians and developers who solicited feedback from clients and worked together to create ACUITY’s new features. TCS’s development process focused on addressing client needs and driving results through several new enhancements to ACUITY.

“There are two specific enhancements to the ACUITY software that our team is particularly proud of,” Pock said.

The first is an improved administrator control panel. Administrators can utilize an intuitive interface to set up business rules to auto-approve authorizations submitted by providers in ACUITY’s provider portal.

“Instant approvals of authorizations improve member and provider satisfaction and enhances efficiency for health plans,” Pock said.

The second feature the TCS team is particularly proud of is the addition of member-specific features in care plan generation. “ACUITY’s power to automatically generate care plans based on predictive analytics and Health Risk Assessments now includes the ability to individualize them with the words of the member,” Pock added.

The new release also adds several other features to address guidelines introduced in CMS’ recent memo, “Guidance on Outreach for Information to Support Coverage Decisions.” It also helps with accreditation needs by increasing workflow efficiency through an enhanced platform that “supports

their workflows,” mentioned Rob Pock. “What our clients get in the end is improved efficiency that helps health plans deliver better care.”
