FOR IMMEDIATE RELEASE:

NHS Successfully Upgrades to ACUITY Advanced Care™ v7.30

*Medical Management Company Automates Workflows and Increases Efficiency
with Latest TCS Software Release.*

Auburn, CA – July 31, 2017 – Nevada Health Solutions LLC (NHS), a URAC accredited medical management company, is the first to upgrade to the latest 7.30 version of TCS Healthcare Technologies' ACUITY Advanced Care™ (ACUITY™) suite of software. ACUITY is a member-centric care management software system from TCS Healthcare Technologies that supports the needs of utilization, case, transitional care, and population health management programs.

NHS uses the latest version of every product in the ACUITY Advanced Care suite, which now supports prior authorization workflow automation, turn-around-time compliance, updated member stratification tools, and automated authorization approvals in the Acuity Connect™ portal. Nancy Nikolski, Senior Director of Medical Management states, "We were excited to be the first upgrading client." The company reports that their need for manual authorization reviews has been reduced by 30% for some services.

Upgrading any software architecture within the medical industry requires a team with the skill and patience necessary to ensure both short and long-term success. "We love having TCS as a partner and we trust them." Nancy Nikloski commented. "We are very pleased with how smoothly the project went."

"We are excited to have the NHS team fully utilizing the entire Acuity 7.30 suite in their workflows, including stratification, automation, auto-approval, and network management," notes Deborah Keller, RN, BSN, CMCN, Chief Operating Officer for TCS. "As always, we enjoyed working closely with the NHS team and I am very pleased that the NHS upgrade project was completed under timeline and under budget."
